

Welcome to the 6th Euro VT/VF Meeting 2014

Dear colleagues,
Dear friends,

as the 5th Euro VT / VF meeting is now behind us and it once again surpassed all our previous meetings despite some impairments caused by the storm "Xaver". Many important ideas and impulses from this conference will influence and enrich our field. This also shows the great echo in the medical press, which our meeting had this time.

New techniques like leadless pacing and subcutaneous defibrillation, new treatment approaches like the modulation of the autonomous nervous system to impinge and prevent ventricular arrhythmias, successful strategies to reduce infection and other complications, stunning data and results from recent studies and last but not least creative food for thought to question traditional thinking and looking for new ways: these were the ingredients of a conference that has probably inspired all of us.

This great success encourages us even more to develop the 6th Euro VT/VF Meeting 2014 to an even more powerful and exciting event. We would like to cordially invite you to attend our meeting on 5/6 December 2014 in Berlin.

The 6th Euro CT/VF Meeting in Berlin will once again be a forum bringing together the leading international colleagues in the field of ventricular arrhythmia that enables all of us to learn and benefit from the experiences and ideas of the best in their field.

We hope that this meeting will find your interest and we look forward to seeing you in Berlin.

K.-H. Kuck
P. Della Bella
G. Hindricks
P. Jais

The meeting is accredited by the European Board of Accreditation in Cardiology.

On the right you find video interviews summarizing the main topics of the 5th EURO VT/VF Meeting 2013.
